Discover the LPIK-SB-Y infection control gown - your comfortable favourite for protection against pathogens and other hazards. We know how important reliable protective clothing is in critical working environments such as the medical sector. That's why we've made this protective gown from robust polypropylene with a special PE coating that provides reliable protection against infectious agents and biological hazards. The protective gown also provides a solid barrier against liquid chemicals. In addition to its protective properties, our protective gown is also lightweight and comfortable so that you always feel good. Whether you are confronted with pathogens or chemical splashes, this isolation gown offers you the protection you need. Lightweight, comfortable to wear and yet extremely robust - perfect for demanding working conditions. *

The infection control gown offers reliable protection against various infectious agents, for example in the form of contaminated liquids or solid particles. Its excellent barrier performance protects the wearer from potentially hazardous substances and is comfortable to wear at the same time.

The isolation gown offers protection against light spray mist, liquid aerosols or splashes of liquid chemicals. The special PE full coating also makes the material resistant to chemicals. The polypropylene material is lightweight and robust, ideal for work where low weight and high durability are required.

Choosing the right size is important when using protective workwear. It increases both wearing comfort and work safety. That's why you can choose between numerous sizes from S - 4XL

Always observe the enclosed information before use.

The protective gown is characterised by its high durability. The isolation gown material has been extensively tested and has proven to be extremely robust. These properties ensure that the protective gown retains its protective function even when used intensively.

Areas of application:

Extremely versatile and powerful in infection control, pharmaceutical industry, medical facilities, care centres, animal welfare, rescue services, light cleaning work.

* Through professional risk-hazard analysis, the appropriate performance requirements and type classes must be identified in order to determine the correct protective suit for the respective application. We will be happy to advise you on the selection.
