These high-quality protective garments have been specially developed to offer you optimum protection when handling hazardous substances. Thanks to the option of wearing the jacket and trousers as a set for head-to-toe safety or individually, you can protect yourself as required. Both garments are ergonomically designed to give you freedom of movement and comfort without compromising on safety. And even in demanding working environments, both retain their shape and protective function thanks to the high quality of the material. *

The protective clothing offers chemical protection against light spray mist, liquid aerosols or splashes. A special finish also makes the barrier material antistatic. The PP spunbond is very robust and lightweight. The protective clothing is therefore ideal when low weight and high demands are required.

The high quality of the material ensures that the CTJAK jacket and CTHO trousers retain their shape and protective function even in demanding working environments. This guarantees constant safety throughout the working day.

Choosing the right size is crucial when using protective clothing. Both comfort and safety are increased by choosing the right size. That's why the chemical protection jacket and trousers are available in a wide range of sizes from XS to 5XL, with other special sizes also available on request.

Areas of application: Handling chemicals, environmental remediation and cleaning, painting work, electronics and semiconductor industry, maintenance and cleaning work; extremely versatile and powerful in trade, production, municipalities, commerce and throughout industry.

The CTJAK chemical protection jacket and CTHO protective trousers are not only functional, but also comfortable. The material is breathable and low-linting, which means that you feel comfortable even during long periods of use and can maintain a high level of hygiene at the same time.

Always read the enclosed information before use.

* Through professional risk-hazard analysis, the appropriate performance requirements and type classes must be determined in order to determine the correct protective suit for the respective application. We will be happy to advise you on the selection.
