

## Blue nitrile glove with cotton winter lining

Art. 3440W

Heat-insulating winter lining

Fully coated nitrile surface

Oil and grease resistant

Nitrile coating for optimum grip

Full coating for maximum protection

Safety cuff for extended wrist protection

Winter lining for warmth and comfort

High abrasion resistance even for demanding work

PPE category: Cat. II

EN ISO 21420:2020  
Protective gloves - General requirements and test methods

EN 388:2016+A1:2018  
Protective gloves against mechanical risks

Innovating your safety

## Maximum grip and warm hands - even in the toughest conditions!

Cold hands and slippery surfaces? Not with the 3440W nitrile glove! Thanks to the fully coated nitrile surface, you have a firm grip even on oily or greasy materials. The soft winter lining keeps your hands warm without restricting your dexterity. And because protection is important in tough everyday working conditions, the cuff provides extra safety on the wrist. Whether on the construction site, in metalworking, in logistics or in the workshop - when conditions are tough, you need a glove that can cope. The 3440W is just the glove for you.

### NITRILE-GRIP COATING

Nitrile is more than just a material - it is your reliable protection in everyday working life. The fully coated surface of the palm and fingers offers first-class abrasion resistance and withstands even the toughest applications. Thanks to the oil and grease-repellent coating, you retain full control even on slippery surfaces. The robust nitrile coating ensures a long service life so that you can rely on your gloves.

### SAFETY CUFF

The rubberised canvas safety cuff not only offers additional protection for the wrist area, but also acts as a buffer against mechanical impacts - be it from knocks, abrasions or flying particles. Thanks to the sturdy finish made of reinforced cotton, the glove stays securely in place, while the wide design makes it quick to put on and take off.

### COMFORTABLE WINTER FEEDING

The winter lining provides very good thermal insulation and ensures comfort when working in cold environments. At the same time, the dexterity of the fingers is maintained so that precise work is possible without restrictions.

### APPLICATION EXAMPLES

Assembly work, maintenance and inspection, handling oily surfaces, repair work, sorting work, storage and logistics activities, handling machines, construction work in cold environments.

### AREAS OF APPLICATION

Industry, construction, trade, metal and mechanical engineering, transport and logistics, warehousing, packaging industry, waste disposal, recycling, working at low temperatures, agriculture and forestry.

### SPECIFICATIONS

PPE category: II  
Coating material: Fully coated nitrile  
Lining material: Polyester winter lining  
Colour: Blue  
Size: 10  
Packaging unit: 72 pairs
